Contents of Volume 128

Number 1, March 1991

Alloy Formation in Supported Pt–Sn Catalysts: Mössbauer Studies	Yong-Xi Li, Kenneth J. Klabunde, and Burton H. Davis	1
The Effect of Ca²⁺ and Mg²⁺ Ions on the Formation of Electron-Deficient Palladium-Proton Adducts in Zeolite Y	Zongchao Zhang, Tim T. Wong, and Wolfgang M. H. Sachtler	13
Microcalorimetric Measurements of Basic Molecule Adsorption on Silica and Silica-Alumina	Nelson Cardona-Martínez and J. A. Dumesic	23
Co-impregnated Rh/Al₂O₃. I. Preparation	J. S. Hepburn, H. G. Stenger, Jr., and C. E. Lyman	34
Co-impregnated Rh/Al₂O₃. II. Nitric Oxide Reduction and SO₂ Poisoning	J. S. Hepburn, H. G. Stenger, Jr., and C. E. Lyman	48
H-ZSM-5-Catalysed Shape-Selective Acetalisation of Aldehydes	M. V. Joshi and C. S. Narasimhan	63
Ion-Exchange Properties of Microporous Monovalent Salts of 12-Tungstophosphoric Acid and 12-Molybdophosphoric Acid Catalysts	G. B. McGarvey and J. B. Moffat	69
Polyoxoanion-Supported, Atomically Dispersed Transition Metals: The Catalytic Oxidation of Cyclohexene with Dioxygen by the Catalyst Precursors [(n-C₄H₉)₄N]₅Na₃[(1,5-COD)Ir · P₂W₁₅Nb₃O₆₂], [(n-C₄H₉)₄N]₅Na₃[(1,5-COD)Rh · P₂W₁₅Nb₃O₆₂], and [(n-C₄H₉)₄N]_{4.5}Na_{2.5}[(C₆H₆)Ru · P₂W₁₅Nb₃O₆₂]	Noritaka Mizuno, David K. Lyon, and Richard G. Finke	84
Spatially Resolved Laser-Induced Fluorescence Imaging of OH Produced in the Oxidation of Hydrogen on Platinum	Erik Fridell, Ulf Westblom, Marcus Aldén, and Arne Rosén	92
New Supported Palladium–Chromium Catalysts: Characterization and Catalytic Properties	A. Borgna, B. Moraweck, J. Massardier, and A. J. Renouprez	99
Reactive Lattice Oxygen Sites for C₄-Hydrocarbon Selective Oxidation over β-VOPO₄	M. E. Lashier and G. L. Schrader	113
Preparation and Benzene Hydrogenation Activity of Supported Molybdenum Carbide Catalysts	Jae S. Lee, Mi H. Yeom, Ki. Y. Park, In-Sik Nam, Jong S. Chung, Young G. Kim, and Sang H. Moon	126
In Situ Electron Microscopy Investigation of the Behavior of Supported Cobalt Particles	S. G. Oh and R. T. K. Baker	137
Heats of Adsorption of Oxygen, Ethylene, and Butadiene on Al₂O₃-Supported Silver	Kristen L. Anderson, Juergen K. Plischke, and M. Albert Vannice	148
Microstructure and Reactivity of Pt–Ce and Rh–Ce Particles on Silica	T. Chojnacki, K. Krause, and L. D. Schmidt	161

Reversal of the SMSI State on Pt/TiO₂ by CO Hydrogenation	186
Katherine J. Blankenburg and Abhaya K. Datye	
A TPD and XPS Investigation of Palladium on Modified Alumina Supports Used for the Catalytic Decomposition of Methanol	198
D. T. Wickham, B. W. Logsdon, S. W. Cowley, and C. D. Butler	
Adsorbate Bonding and the Selection of Partial and Total Oxidation Pathways	210
S. Ted Oyama	
Reduction/Oxidation of a High Loading Iron Oxide Catalyst	218
Heon Jung and William J. Thomson	
The Role of Surface Structure and Dispersion in CO Hydrogenation on Cobalt	231
Byron G. Johnson, Calvin H. Bartholomew, and D. Wayne Goodman	
Synthesis and Characterization of New VPO Catalysts for Partial <i>n</i>-Butane Oxidation to Maleic Anhydride	248
N. Harrouch Batis, H. Batis, A. Ghorbel, J. C. Vedrine, and J. C. Volta.....	
The Active Phase in Sodium-Doped Calcium Oxide Catalysts for Oxidative Coupling of Methane	264
X. D. Peng and P. C. Stair	
Catalytic Properties of Well Dispersed Supported Ruthenium Alloys	275
B. Coq, A. Bittar, R. Dutartre, and F. Figueras	

Note

Oxidative Dehydrogenation of Cyclohexane over Vanadate Catalysts	287
M. C. Kung and H. H. Kung.....	

Number 2, April 1991

Amorphous AlPO₄ as Catalyst Support. 2. Characterization of Amorphous Aluminum Phosphates	293
Bernd Rebenstorf, Thomas Lindblad, and S. Lars T. Andersson.....	
Amorphous AlPO₄ as Catalyst Support. 3. CO FTIR Study of AlPO₄ Impregnated with Chromium	303
Bernd Rebenstorf and Thomas Lindblad	
CH₃NO₂ Addition to CO Hydrogenation over a Ru/KY Catalyst	311
F. A. P. Cavalcanti, R. Oukaci, I. Wender, and D. G. Blackmond.....	
An Investigation of Ethylene Hydrogenation Catalyzed by Metallic Molybdenum Using an Isolatable High-Pressure Reactor: Identification of the Reaction Site and the Role of Carbonaceous Deposits	320
Luping Wang and W. T. Tysoe	
Properties of Ni/SiO₂ Catalysts: Relationship to Ether Formation from Alcohols	337
L. S. Kraus, Herman Pines, and J. B. Butt	
Photocatalyzed Mineralization of Cresols in Aqueous Media with Irradiated Titania	352
Rita Terzian, Nick Serpone, Claudio Minero, and Ezio Pelizzetti	
Hydrochlorination of Acetylene Using Gold Catalysts: A Study of Catalyst Deactivation	366
Bongani Nkosi, Neil J. Coville, Graham J. Hutchings, Mike D. Adams, J. Friedl, and Fritz E. Wagner.....	

Hydrochlorination of Acetylene Using Carbon-Supported Gold Catalysts: A Study of Catalyst Reactivation

Bongani Nkosi, Mike D. Adams, Neil J. Coville, and Graham J. Hutchings	378
Enantioselective Hydrogenation. II. Variation of Activity and Optical Yield with Experimental Variables in Methyl Pyruvate Hydrogenation Catalyzed by Cinchona-Modified Platinum/Silica (EUROPT-1)	
P. A. Meheux, A. Ibbotson, and P. B. Wells	387
Effect of Carbon Support and Mean Pt Particle Size on Hydrogen Chemisorption by Carbon-Supported Pt Catalysts	
C. Prado-Burguete, A. Linares-Solano, F. Rodríguez-Reinoso, and C. Salinas-Martínez de Lecea	397
Evidence for a Carbonate Species during CO Oxidation on Deactivated Rh(111)	
C. H. F. Peden and J. E. Houston	405
Non-Faradaic Electrochemical Modification of Catalytic Activity. 4. The Use of β''-Al₂O₃ as the Solid Electrolyte	
C. G. Vayenas, S. Bebelis, and M. Despotopoulou	415
Xe NMR and Ar Quasi-equilibrium Sorption of Coked H-Y Zeolite	
J. T. Miller, B. L. Meyers, and G. J. Ray	436
Titration by H₂ and O₂ of Bare or Covered Pt Surfaces followed by ¹²⁹Xe NMR	
G. P. Valençā and M. Boudart	447
Comparison Studies of <i>in Situ</i> Loaded and Impregnated Silicalite-Cobalt Oxides	
Ben-Zu Wan, Rayford G. Anthony, Carlos Saldarriaga, Jaime Perez, V. P. Shiralkar, and Abraham Clearfield	458
Role of Metallic Promoters in the Direct Synthesis of Methylchlorosilanes	
L. D. Gasper-Galvin, D. M. Sevenich, H. B. Friedrich, and D. G. Rethwisch	468
The Interaction of Cesium Ions with Silica-Supported 12-Molybdophosphoric Acid	
S. Kasztelan, E. Payen, and J. B. Moffat	479
The Effect of Pillaring Montmorillonite and Beidellite on the Conversion of Trimethylbenzenes	
M. Kojima, R. Hartford, and C. T. O'Connor	487
Characterization of the Nature of Surface Sites on Vanadia-Titania Catalysts by FTIR	
Nan-Yu Topsøe	499
Oxidative Coupling of Methane over La₂O₃-CaO Catalysts. Effect of Bulk and Surface Properties on Catalytic Performance	
Stefan Becker and Manfred Baerns	512
Coke Formation on ZSM-5 Zeolites: Evidence from NMR Spectrometry of Sorbed Xenon Gas	
Chihji Tsiao, Cecil Dybowski, Anne M. Gaffney, and John A. Sofranko	520
Influence of Metal Particle Size and Support on the Catalytic Properties of Supported Rhodium: CO-O₂ and CO-NO Reactions	
Se H. Oh and Carolyn C. Eickel	526
A Comparison of Alumina, Carbon, and Carbon-Covered Alumina as Supports for Ni-Mo-F Additives: Carbon Deposition and Model Compound Reaction Studies	
P. M. Boorman, K. Chong, R. A. Kydd, and J. M. Lewis	537
Shape-Selectivity over HZSM-5 Modified by Chemical Vapor Deposition of Silicon Alkoxide	
Takashi Hibino, Miki Niwa, and Yuichi Murakami	551

The Influence of Phosphorus on the Structure and Hydrodesulfurization Activity of Sulfided Co and Co-Mo Catalysts Supported on Carbon and Alumina	
S. M. A. M. Bouwens, A. M. van der Kraan, V. H. J. de Beer, and R. Prins.	559
Synthesis of Aldehydes from Synthesis Gas over Na-Promoted Mn-Ni Catalysts	
Steven S. C. Chuang and Shyh Ing Pien	569
Effect of Promoters on V₂O₅/SiO₂ Catalysts Active for the Selective Reduction of NO	
Robert B. Bjorklund, Sven Järås, Ulf Ackelid, C. U. Ingemar Odenbrand, Lars A. H. Andersson, and Jan G. M. Brandin.....	574
Note	
Kinetics of Dibenzothiophene Hydrodesulfurization	
T. C. Ho and J. E. Sobel	581
Author Index for Volume 128.	585

NOTICE

The Subject Index for Volume 128 will appear in the December 1991 issue as part of a cumulative index for the year 1991.

INFORMATION FOR AUTHORS

The *Journal of Catalysis* publishes articles dealing with original studies in heterogeneous and homogeneous catalysis as well as studies relating catalytic properties with chemical processes at surfaces, studies of chemistry of surfaces, and engineering studies related to catalysis. All articles will be published in English.

Submission of Manuscripts. Manuscripts should be sent by registered mail to either of the Editors:

Professor Gary L. Haller
Department of Chemical Engineering
P.O. Box 2159 Yale Station
Yale University
New Haven, Connecticut 06520

Professor Frank S. Stone
School of Chemistry
University of Bath
Bath BA2 7AY, England

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Catalysis* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of Manuscript. Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. Submit manuscript (in English) in triplicate, including the original typewritten copy, with copies of all figures and tables. Originals of micrographs should also be submitted in triplicate for purposes of manuscript reviewing. All material (including tables, reference lists, etc.) should be typed double-spaced on one side of 8.5 × 11-in. white bond paper (with 1-in. margins on all sides). Each page of the manuscript should be numbered. *Page 1* should contain the article title, authors' names (without degrees), affiliations, a running title (abbreviated form of title) not exceeding 45 letters and spaces, and the name and complete mailing address (and telephone and fax numbers, if possible) of the person to whom proof should be mailed. *Page 2* should contain a short abstract.

Authors should use descriptive headings in this order: Abstract, Introduction, Methods, Results, Discussion, Acknowledgments, and References.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

If the manuscript refers to recently submitted manuscripts or papers in press (with the *Journal of Catalysis* or other journals) then please supply three copies of them so that the reviewers can judge the new manuscript in its proper context.

Revised manuscripts should be returned with one copy marked to show where changes have been made.

Notes and Letters to the Editor may not exceed 8 double-spaced typewritten manuscript pages (including tables and figures). Accepted Notes will not receive publication priority over articles.

Letters to the Editor will be considered for priority publication under the following conditions: (a) Letters must be related to some statement made in a recently published article in this Journal; (b) in cases of conflicting views on any topic, no more than one Letter from each author will be accepted.

Units of weights, measures, etc., when used in conjunction with numerals should be abbreviated and unpunctuated (e.g., 10%, 50 ml, 3 g, 8 cm).

The SI (Système International) system of units will be accepted without editorial change. Authors using other units are encouraged to define them in terms of SI units once in each publication, e.g., in an article where pressures are quoted in Torr to write "1 Torr = 133.3 N m⁻²." For information concerning SI units, see *Quantities, Units and Symbols for Physical Chemistry*, 4th ed., prepared by I. Mills and published by Blackwell Scientific, Oxford, 1988.

Footnotes should be avoided if possible; but if essential, they should be designated by superscript Arabic numerals (starting with title) in the text.

Tables should be numbered with Arabic numerals in order of mention in the text. They should be typed double-spaced on separate pages. Each table should have a short descriptive caption typed (double-spaced) above the table. Table footnotes (indicated by superscript, lowercase, italic letters) should be typed at the end of the table.

Figures should be numbered with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed double-spaced together on a separate page. All illustrations should be in finished form suitable for reproduction. They should be planned to fit the proportion of the printed page (5.5 × 8 in.; column width, 2-5/8 in.). No figures should exceed 8.5 × 11 in. (21 × 27.5 cm). Lettering on drawings should be of professional quality or generated by high-resolution computer graphics and should be large enough (10–12 points) to take a reduction of 50–60%. Drawings should be made with black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, high-quality computer graphics may be acceptable. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black.

Copies of drawings are not acceptable unless they are high contrast glossy prints. All but the very simplest structures and structural formulas must be designed for direct reproduction. Illustrations in color can be accepted only if the authors defray the cost.

Electron micrographs. Please supply three photographic copies of these so that the reviewers can inspect the fine details they contain.

References to the literature should be cited in the text by italic Arabic numerals in parentheses, set on the text line, and listed numerically at the end of the paper. Abbreviations of journal titles should follow the style used in *Chemical Abstracts' Service Source Index*, 1985. Style and punctuation of references should be in accordance with the following examples:

1. Latef, A., Aissi, C. F., and Guelton, M., *J. Catal.* **119**, 368 (1989).
2. Louis, C., and Che, M., in "Reactivity of Solids" (P. Barret and L. C. Dufour, Eds.), Vol. B, p. 1057. Elsevier, Amsterdam, 1985.
3. Pines, H., "The Chemistry of Catalytic Hydrocarbon Conversions." Academic Press, New York, 1981.

Proofs. Proofs will be sent to the author, with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty reprints without covers will be provided free of charge. Additional reprints may be purchased; an order form will be included with proofs.

The AMI-1... providing a world of information for catalyst characterization

More than just a chemisorption apparatus, the AMI-1 is a characterization system that simplifies the study of catalyst surface properties. Seven flow and pulse techniques generate comprehensive information about your catalysts.

The AMI-1 enables you to:

- measure kinetic & thermodynamic parameters of adsorption/desorption processes
- study surface site heterogeneity
- fingerprint catalysts
- examine coverage-dependent phenomena
- generate reduction/oxidation profiles
- determine active metal surface area & total catalyst surface area
- determine pore size distribution

TPD, TPR, TPO, BET and chemisorption are only some of the techniques that you can perform with the system.

The AMI-1 reflects the innovative spirit of Altamira Instruments, a firm founded by catalyst researchers dedicated to meeting your professional needs.

Altamira Instruments

Journal of Parallel and Distributed Computing

Kai Hwang

Editor-in-Chief for Special Issues
and Invited Papers

University of Southern California, Los Angeles

Howard Jay Siegel

Editor-in-Chief for Submitted
Research Papers

Purdue University, West Lafayette, Indiana

This international journal is directed to researchers, engineers, educators, managers, programmers, and users of computers who have particular interests in parallel processing and/or distributed computing. The **Journal of Parallel and Distributed Computing** publishes original research papers and timely review articles on the theory, design, evaluation, and use of parallel and/or distributed computing systems.

Special Issues Devoted to Key Topics in the Field

These informative editions are now available for purchase as single issues.

ISBN: 0-12-254125-1

Sol-Gel Science

The Physics and Chemistry of Sol-Gel Processing

Jeffrey Brinker and George W. Scherer

This is the first book to assimilate the principles of chemistry, physics, and materials science, thereby providing a fundamental understanding of sol-gel processing. It details the processing sequence from beginning to end including discussions on the chemistry of hydrolysis and condensation of metalorganics and inorganic salts, the growth of polymeric or particulate species in gels, gelation, aging of gels, drying, structure of gels, and sintering.

March 1990, c. 784 pages

\$135.00 (tentative)/ISBN: 0-12-134970-5

Identification of Essential Oils by Ion Trap Mass Spectroscopy

Robert P. Adams

This handbook presents the ion trap mass spectra of the most common terpenes (hydrocarbons found in oils, resins, and balsams) found in nature, including relative retention/elution times, an extensive synonymy of common and IUPAC names, CAS registry numbers, molecular formulas, and structures.

CONTENTS: **Ion Trap Mass Spectroscopy:** Introduction. Ion Trap Mass Spectroscopy. Operating Conditions Used for Spectra Acquisition. References. Explanations of Formats Used in Appendixes.

Appendices: Alphabetical Listing of Compounds with Their Retention Time on DB-5; Compounds Sorted in Order of Elution Times on DB-5. Ion Trap Mass Spectra of Compounds. Cross Index of Common Names. Index to Compounds by CAS Numbers.

May 1989, 302 pages, \$39.95

Chemistry at Interfaces

Finlay MacRitchie

This book presents a practical approach to interfacial chemistry. It is intended to provide students and research workers who have not had their training in a school of surface chemistry with the means to set up and use interfacial techniques and to interpret measurements. For this reason, more emphasis is given to experimental detail and to the associated pitfalls than most other books in the field. In addition, **Chemistry at Interfaces** deals with relevant theoretical concepts.

January 1990, c. 275 pages
\$49.95 (tentative)/ISBN: 0-12-464785-5

Material Concepts in Surface Reactivity and Catalysis

Henry Wise and Jacques Oudar

This volume presents the advances of the last 25 years on the complex processes occurring on solid surfaces during catalysis, corrosion, adhesion, field deposition, and related phenomena.

CONTENTS: **Introduction. Structural Aspects:** Symmetry Properties. Crystallite Morphology. Interface Equilibria. Adsorption and Desorption Kinetics. Binding States and Adsorbate Structures. Interface Reactions between Metals and Support Materials. Electronic Properties of Non-metal Catalysts. Disorder in Multicomponent Metal Oxides. Metal Oxide Catalysis. Surface Properties of Grain Boundaries. Oxide Layer Formation on Metal Surfaces. Metal-Electrolyte Interfaces. Index.

March 1990, c. 226 pages
\$55.00 (tentative)/ISBN: 0-12-759940-1

Journal of Differential Equations

Editor-in-Chief
Jack K. Hale

Georgia Institute of Technology, Atlanta

This journal is concerned with the theory and the application of differential equations. The **Journal of Differential Equations** publishes articles addressed not only to mathematicians, but also to those engineers, physicists, and other scientists for whom differential equations are valuable research tools.

Research Areas Include

- Mathematical control theory
- Ordinary differential equations
- Partial differential equations
- Related topics
- Stochastic differential equations
- Topological dynamics
